BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Pursuant to a legislative requirement, GAO reviewed selected aspects of the Armys industrial base for the production of artillery projectile metal parts, focusing on: (1) how Army and Marine Corps inventories of artillery projectiles compare with stated requirements; (2) the Armys production base for artillery projectiles; and (3) the Armys plans for procuring advanced artillery rounds and parts. GAO found that: (1) in November 1994, the Armys inventory of artillery projectiles totalled 20.8 million at the wholesale level; (2) the Armys inventory consisted of 27 types of projectiles stored at U. S. and international locations; (3) over 98 percent of the inventory was usable, but some projectile types were understocked or obsolete; (4) the inventory was more than adequate to meet the Armys training and combat requirements for most artillery projectiles; (5) as of March 1995, the Marine Corps inventory of 24 projectile types stands at about 4 million, of which about 85 percent is usable; (6) the Marine Corps has also understocked five of the 24 projectile types while maintaining seven types of obsolete projectiles; (7) because of decreasing requirements and funding constraints, the Army has reduced its active industrial base for artillery projectiles; (8) the Army believes that the reduced base is adequate for meeting its planned procurements as well as that of the Marine Corps; and (9) although the Army plans to produce 3 of its 4 new advanced artillery projectiles in-house, it has not yet decided where to produce the projectiles metal parts. This item ships from La Vergne, TN. Paperback.
